

hollow decking

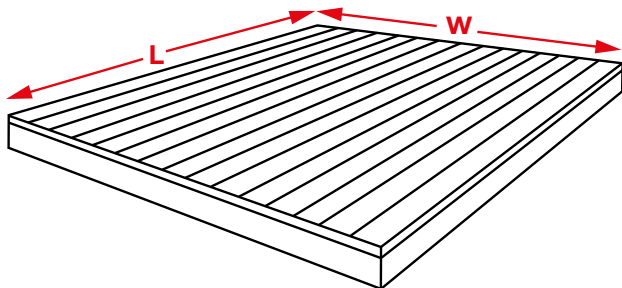

CALCULATOR

How to calculate how much composite decking you require

HOW TO MEASURE

- ▶ Measure the length and width of the area you are planning on decking. You can add multiple areas if your decking is not square. Take into the account which direction you would like the decking boards to run.

THINGS TO CONSIDER

- ▶ Providing expansion gaps allows proper drainage and ventilation to the sub base which prevents the timber from rotting
- ▶ Do not lay the decking boards directly onto a solid surface
- ▶ Always allow 150mm air-gap to create unobstructed airflow under the deck

COMPOSITE DECKING CALCULATOR

Double sided hollow decking board
(Woodgrain & Grooved)
Size: D:25mm x W:146mm x L:3.66m

2 boards per square meter
12 clips per board

EXAMPLE:

Example deck area 4m x 3m = 12 sq m
Boards required 12sq m x 2 boards = 24 Boards
Clips 24 x 12 = 288 clips
